Cikarang Barat, Bekasi

Highly motivated Information Technology fresh graduate passionate about Software Engineering and Artificial Intelligence. Hands-on experience in developing Android applications, backend systems (Flask, Express.js), and deploying Machine Learning models. Ready to contribute technical expertise and a collaborative mindset to an innovative tech company

Educations

Universitas Esa Unggul Sep 2022 - Oct 2026

Bachelor of Computer Science, 3.86/4.00

- LDK IKMI Secretary: Managed administrative operations and spreadsheet databases for 50+ members across 15+ events, achieving an 80% average attendance rate.

Work Experience

PT Sumitomo Electric Wintec Indonesia Oct 2025 - Jan 2026

IT Intern

- Developed an Android-based application as a solo developer to digitize and streamline internal operational workflows, successfully transitioning manual procedures to a paperless system.
- Designed a Role-Based Access Control (RBAC) system with a dynamic dashboard accommodating 3 distinct permission levels (e.g., field operators, reviewers, and PIC).
- Implemented a hierarchical 4-stage tracking system with conditional access and dynamic input forms (supporting text, multiple-choice, and image uploads) to accelerate and monitor the reporting process.

Projects

Event Expense Tracker

- Built an AI-powered Android application to automate event expense tracking by extracting data from physical shopping receipts.
- Integrated a Python-based AI model (BiLSTM-CRF) for receipt scanning with a Kotlin-based frontend, achieving up to 92% data detection accuracy on standard receipts.
- Developed automated expense accumulation features (per event and overall) and implemented robust search and date filtering functionalities to enhance data management.

Library Management Web

- Developed a full-stack web application using PHP and MySQL to digitize book catalogs and automate loan circulation.
- Implemented an RBAC system to securely manage multi-state loan workflows, automatic fine calculations, and real-time inventory updates.
- Designed a responsive user interface featuring live search, dynamic category filters, and an interactive history dashboard for users.

U.S. Tariff Sentiment Analysis

- Conducted sentiment analysis on U.S. import tariff policies using over 10,154 cleaned data crawled directly from Twitter.
- Developed, trained, and evaluated classification models, specifically comparing SVM (using TF-IDF) and BiLSTM (using FastText).
- Achieved a peak classification accuracy of 91% with the BiLSTM model, significantly outperforming the SVM baseline (81%).

Technical Skills

- **Web**: HTML, CSS, JavaSript, PHP
- **Android**: Kotlin, Jetpack Compose, Android Studio
- **Backend & Databases**: Express.js, Flask, MySQL, SQL Server, Realm
- **AI & Data Science**: Python, Scikit-Learn, TensorFlow, NLP, Google ML Kit
- **Tools**: VS Code, Git/Github, Figma, Draw.io, Spreadsheets
